

GENERAL

The System Sensor I³ Series smoke detectors represent a significant advancement in conventional detection. The I³ family is founded on three principles: installation ease, intelligence, and instant inspection.

The I³ Series redefines installation ease with its plug-in design. This allows an installer to pre-wire the bases included with the heads. The large wire entry port and in-line terminals provide ample room for neatly routing the wiring inside the base. The base accommodates a variety of back box mounting methods as well as direct mounting with dry-wall anchors. To complete the installation, I³ heads plug-in to the base with a simple action.

I³ detectors offer a number of intelligent features to simplify testing and maintenance. Drift compensation and smoothing algorithms are standard with the I³ line, to minimize nuisance alarms. When connected to the 2W-MOD loop test/maintenance module, or an I³ ready panel (MS-2 and MS-4) equipped with the I³ protocol, 2-wire I³ detectors are capable of generating a remote maintenance signal when they are in need of cleaning. This signal is indicated via an LED located at the module and/or the panel. To read the sensitivity of I³ detectors, the SENS-RDR is a wireless device that displays the sensitivity in terms of percent per foot obscuration.

The I³ Series provides wide angle red and green LED indicators for instant inspection of the detector condition, indicating: normal standby, out-of-sensitivity, alarm, or freeze trouble conditions. When connected to the 2W-MOD loop test/maintenance module or an I³ ready panel (MS-2 and MS-4) with the I³ protocol, the EZ Walk loop test feature is available on 2-wire I³ detectors. This feature verifies the initiating loop wiring by providing LED status indication at each detector.
